PROFESSIONAL SUMMARY

Data Engineer at Kyndryl working in the Agentic AI team, building intelligent systems that automate operational analysis and decision-making. Developed multiple AI agents for Incident Analysis, Change Risk Evaluation, Event Intelligence, SLA Monitoring, Actionable Insights, and Security Vulnerability detection. Focused on Elasticsearch, Python, and AIOps to transform complex operational data into actionable insights and improve enterprise reliability and automation. 2.5+ years of expertise in real-time data pipelines, ETL, Kibana dashboards, and service management (95%+ SLA compliance).

EXPERIENCE

Kyndryl Solutions Data Engineer & AI/ML Developer <i>Bengaluru, India</i>	Sep 2023 - Present
- Designed & developed 6 AI-powered agents -- Change Request Risk Assessment, Business SLA Breach Prediction, Event-Correlation-Bridge, Incident Correlation with Historical Data, Actionable-Insights-Agent, and Incident-Assignment-Agent -- using LangGraph, LangChain, and LLMs. - Automated risk evaluation, SLA monitoring, incident correlation, and intelligent ticket assignment -- reducing manual intervention by ~60%, saving an estimated 200+ engineer-hours/month and ~\$150K+ annually in operational costs for the customer. - Analyzed large datasets with Elasticsearch, Kibana, and SQL, delivering insights that enhanced customer deliverables and informed strategy. - Designed intuitive Kibana dashboards to present clear, actionable data visualizations, enabling stakeholders to drive efficient and informed business strategies. - Ensured data accuracy and quality through rigorous validation, ETL processes, and SQL scripting in Elasticsearch, reducing data processing times by ~40% and enhancing operational efficiency for client deliverables. - Collaborated with support teams using ServiceNow (SNOW) for ticket tracking and incident resolution, escalating over 150 technical support issues related to production and PSE environments, while integrating Logstash for streamlined data pipelines. - Maintained end-to-end ticket ownership with MTTR <24 Biz Hrs (INC, >95%) and <40 Biz Hrs (RITM, >90%); zero escalations to upper management -- avoiding estimated \$50K+ in SLA penalty costs annually. - Served as SME for Elasticsearch integration across the Agentic AI team -- designed queries, troubleshoot data retrieval, and ensured seamless integration for all agent use cases. - Provided hands-on assistance to Agentic AI and Data Engineering teams -- clarified ticket context, resolution patterns, and SLA implications, reducing knowledge bottlenecks and accelerating development timelines. - Automated scheduled data requests and dashboard refresh pipelines, preventing escalations and ensuring data availability with 100% accuracy across all accountable dashboards. - Maintained 100% compliance with security, leave, shift policies, and time-clocking accuracy throughout the review period.	

PROJECTS

AI-Powered Agents for AIOps	Nov 2024 - Present
- Built 6 agents: Change Risk Assessment, SLA Breach Prediction, Event-Correlation-Bridge, Incident Correlation (Historical), Actionable-Insights, and Incident-Assignment -- automating risk evaluation, monitoring, and ticket routing; reduced incident resolution time by ~35% and cut manual triage effort by ~70%. - Containerized all agents using Docker and docker-compose for production-ready deployments; gained hands-on Kubernetes orchestration skills.	
Analytical Dashboards	Nov 2023 - Present
- Built and maintained Python-based dashboards (POS, Inventory, Global Resiliency, CSI) using Elasticsearch, Kibana, and SQL for data modeling, equipping executives with actionable visualizations in agile sprints. - Enhanced dashboards with Python collation scripts and automated ETL integrations, eliminating ~15 hours/week of manual data preparation and enabling real-time reporting.	
Service Management	Sep 2023 - Present
- Resolved 150+ ServiceNow (SNOW) incident/RITM tickets, fixing data visualization/control issues for reliable production support and customer deliverables. - Led account onboarding/offboarding processes, streamlined agile workflows -- reducing onboarding cycle time by ~30%, strengthening client trust and operational efficiency.	

TECHNICAL SKILLS

AI/ML: LangGraph, LangChain, LLMs (GPT), Agentic AI, Prompt Engineering, RAG
Languages: Python (3+ years), SQL, Java (Basics), C++
Data & Analytics: Elasticsearch, Kibana, Logstash (ELK Stack), ETL Pipelines, Data Modeling, Real-Time Streaming
DevOps & Cloud: Docker, Kubernetes, Azure, AWS, CI/CD
Databases: Elasticsearch, SAP HANA, Oracle, MySQL Workbench
Enterprise Tools: ServiceNow (SNOW), SAP, SAP T-Codes, Git/GitHub, Agile/Scrum

EDUCATION

Jain University Master of Computer Applications (MCA) <i>Bengaluru, India CGPA: 9.4/10.0</i>	Jan 2024 - Feb 2026
REVA University Bachelor of Computer Applications (BCA) <i>Bengaluru, India CGPA: 8.2/10.0</i>	Sep 2020 - Apr 2023

SOCIETIES & ACTIVITIES

- Data Team -- TnI Team (AIOps), Kyndryl Solutions: Led team in process improvement, ticket closure, and cross-team knowledge sharing.
- Volunteer Data Analyst, Kyndryl Solutions: Contributed to off-boarding ticket closure and process optimization across multiple accounts.
- Fostered a culture of shared ownership, mentoring team members on Elasticsearch, data pipelines, and incident management best practices.
