PROFESSIONAL SUMMARY

AI/ML Developer and Data Engineer with 2.5+ years designing and shipping production multi-agent AI systems — 9+ autonomous agents built on LangGraph, LangChain, RAG, and an internally hosted LLM, with Human-in-the-Loop approval gating every high-risk action. Applied to automate the full enterprise ITSM lifecycle (Incident, Problem, Change, Service Request, Event Management). Track record: ~60% cut in manual intervention, ~\$150K in annual savings, and an Elasticsearch/Kibana/ETL data foundation powering real-time dashboards for enterprise stakeholders.

EXPERIENCE

Kyndryl Solutions — Data Engineer & AI/ML Developer Bengaluru, India	Sep 2023 – Present
- Started as a Data Engineer on Elasticsearch, Kibana, and ETL pipelines, then took ownership of the team's first Agentic AI initiative — now the technical lead for the agent platform within the TnI (AIOps) team. - Sole owner of the agent platform end-to-end — architecture, agent design, and production deployment — across the full ITSM lifecycle (Incident, Problem, Change, Service Request, Event Management). - Cut manual intervention ~60%, saving 200+ engineer-hours/month (~\$150K annually) by automating incident correlation, change-risk scoring, and ticket routing that previously required manual review. - Reduced incident resolution time ~35% by building Human-in-the-Loop (HITL) approval gates that let agents act autonomously on low-risk cases while routing high-risk ones to a human reviewer. - Built and own the Elasticsearch data layer (indices, ETL pipelines, query design) powering both the agent platform and 4 executive dashboards (POS, Inventory, Global Resiliency, CSI), cutting data processing time ~40%. - Serve as team SME for Elasticsearch integration, unblocking other engineers on query design and retrieval issues across the Agentic AI team.	

PROJECTS

Agentic AI Platform for IT Service Management & AIOps	Nov 2024 – Present
- Architected a multi-agent system in LangGraph orchestrating 9+ specialized agents (risk scoring → routing → escalation) deployed across 50+ use cases for a major enterprise customer, including Change Backout Trigger and Change Window Reminder agents. - Built an end-to-end Incident Debug & Remediation Agent that autonomously identifies the affected host and OS, runs diagnostics, debugs the root cause, and remediates the issue — delivering a complete resolution summary without manual triage. - Applied RAG and prompt engineering against the internally hosted LLM to ground agent outputs in historical incident data, eliminating a recurring class of hallucinated responses flagged by reviewers on ambiguous, edge-case tickets. - Integrated agents with ServiceNow (ITSM), Microsoft Teams (Adaptive Cards for HITL approvals), and Ansible Tower via an internal CACF for automated remediation execution; containerized all agents with Docker/docker-compose for production deployment.	
Analytical Dashboards	Nov 2023 – Present
- Designed ETL pipelines transforming multi-source operational data into Elasticsearch indices optimized for fast aggregation, powering 4 executive dashboards in agile sprints. - Automated data validation and refresh scheduling, eliminating ~15 hours/week of manual prep and achieving 100% on-time dashboard availability.	

TECHNICAL SKILLS

AI/ML & Agentic Systems: LangGraph, LangChain, LLMs (GPT, company-hosted LLM), Agentic AI, Human-in-the-Loop (HITL) Workflows, Prompt Engineering, RAG
Languages: Python (3+ years), SQL
Data & Analytics: Elasticsearch, Kibana, Logstash (ELK Stack), ETL Pipelines, Data Modeling, Real-Time Streaming
DevOps & Cloud: Docker, Kubernetes, Azure, AWS, CI/CD
Databases: Elasticsearch, SAP HANA, Oracle, MySQL
Enterprise Tools & ITSM: ServiceNow (SNOW) — Incident, Problem, Change, Service Request, Event Management; SAP, SAP T-Codes, Git/GitHub, Agile/Scrum

EDUCATION

Jain University — Master of Computer Applications (MCA) Bengaluru, India CGPA: 9.4/10.0	Jan 2024 – Feb 2026
REVA University — Bachelor of Computer Applications (BCA) Bengaluru, India CGPA: 8.2/10.0	Sep 2020 – Apr 2023
